 Brick Mould

25 Reasons
 why YOU should say
YES to Design Pine™

1. Produced from sustainable plantation **RADIATA PINE**.
2. Radiata pine is a proven and accepted building material globally.
3. An **ALL WOOD** engineered, finger-jointed/edge-glued, clear and defect-free product.
4. Uses an exterior glue system with **TECO & ASTM** ratings.
5. Treated with an organic, full penetration Tanalised® Azure treatment system guaranteed against rot & termites for **30 years**.

6. The Tanalised® Azure 30 Year Warranty is provided directly by Arch Wood Protection worldwide leaders in wood preservation.
7. Tanalised® Azure, a sister brand to Wolmanized®, is internationally recognized and proven.
8. Tanalised® Azure is internationally EPA registered and is a safe & eco-friendly treatment system.
9. All Design Pine™ products are flashed off after treatment. This is controlled in flash off chambers at ITI's manufacturing location in Chile. Precise measurement of 'flash off' is achieved through heat/airflow & weight differential. Flash off is critical as it ensures complete safety compliance and adhesion of our primer system.
10. The treatment is scientifically tested through a GLC (Gas Liquid Chromatograph) scientific instrument in our in-house laboratory. The GLC process ensures correct chemical retention and penetration.
11. Uses a two-coat primer system, one coat oil-based, one coat water-based, oven-dried and polished.
12. The Design Pine™ primer system is proprietary technology, exclusive to ITI. This system has been designed specifically to work with the Tanalised® Azure treatment system.
13. Primer system warranted against peeling and blistering for one year before top coating.
14. Design Pine™ is a dimensionally stable product achieved through finger-jointing & laminating and the dry organic treatment process.
15. In addition to stopping rot, the dry organic treatment process also imparts water repellency through waxes & resins used in this process. This also assists dimensional stability.
16. Easy to handle & work with.
17. Excellent nailing characteristics.
18. Non corrosive to nails and fasteners.
19. Proven in the harsh climate of Australia and the USA.

20. Market leader in Australia.
21. Competitively priced—cheaper than PVC products and without the stigma of polyvinyl chloride. Refer to www.besafenet.com/pvc/about.htm or www.healthybuilding.net/pvc/facts.html
22. All wood, not imitation-like composites.
23. Easy to maintain with excellent primer system and a quality top coating, Design Pine™ will stand the test of time.
24. Builder Rebate & Reward Programme.
25. Design Pine™, a wood product produced from **SUSTAINABLE PLANTATION PINE**, is a positive eco contributor from tree to house and afterlife.
